S.S. 7 Lesson 1

Social Studies Grade 7 Lesson 1

Adapting to and Modifying Environments About 12,000 years ago, the last ice age ended. Glaciers melted. The land bridge between Siberia and Alaska disappeared.

Adapting to and Modifying Environments About 12,000 years ago, the last ice age ended. Glaciers melted. The land bridge between Siberia and Alaska disappeared.

About the same time, some kinds of large animals died out. This forced hunting bands to adapt to new conditions. Smaller animals, wild berries, nuts, grains, and fish became a larger part of their diets.

About 5,000 years ago, people in the Americas learned to grow crops such as corn, beans, and squash. Farming modified the environment and brought great changes to those who practiced it. Farmers no longer had to keep moving to find food. Instead, they stayed in one place and began to build permanent **settlements**, or small communities. As farming methods improved, people produced more food, which in turn allowed the population to grow.

Our Services:

- **Students can email their teachers with any questions.**
- **All-day help desk available for technical support, inquiries about class, homework, etc. for students, parents, supervisors, and institutes.**
